

**Concrete/Pictorial/Abstract
Maths Calculation Policy**

Introduction

This policy has been largely adapted from the White Rose Maths Hub Calculation Policy with further consultation with teachers from Stanburn and material added. It is a working document and will be revised and amended as necessary. This policy is a statement of the aims, principles and strategies for teaching and learning of calculation strategies in Mathematics. It is designed to help teachers and staff at Stanburn Primary School to ensure that calculation is taught consistently across the school and to aid them in helping children who may need extra support or challenges. This policy is also designed to help parents, carers and other family members support children's learning by providing an explanation of the methods used in our school. The policy is set out in subjects: addition, subtraction, multiplication and division. Within each specific area, there is a progression of skills, knowledge and layout for written methods. The calculation strategies which will be used will reflect this ideology – moving from concrete to pictorial and then abstract recording leading to more formal written methods.

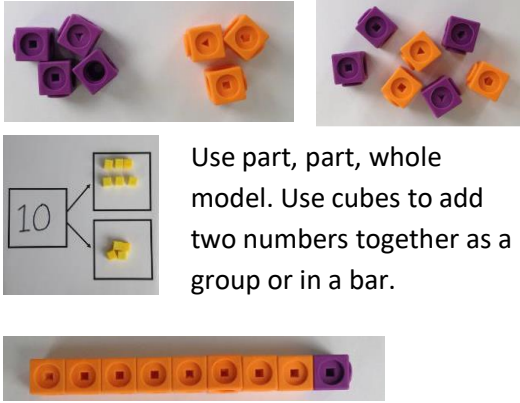

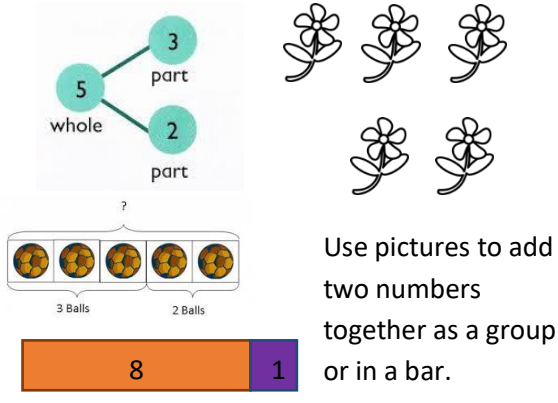

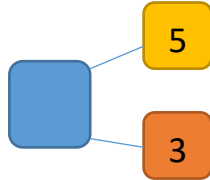

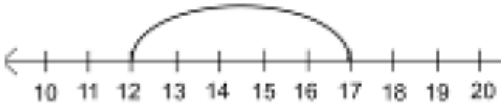

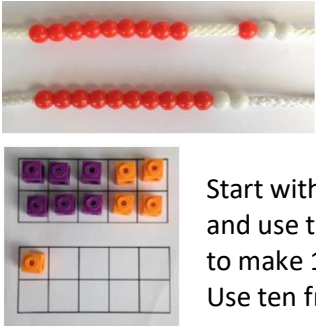

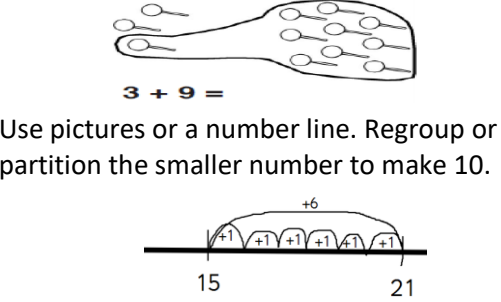

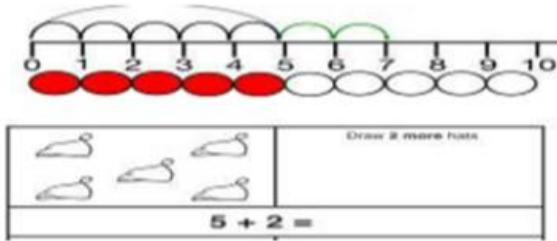

Concrete representation— a pupil is first introduced to an idea or skill by acting it out with real objects. This is a 'hands on' component using real objects and is a foundation for conceptual understanding.

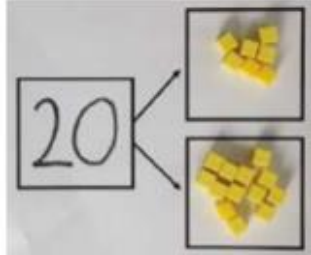

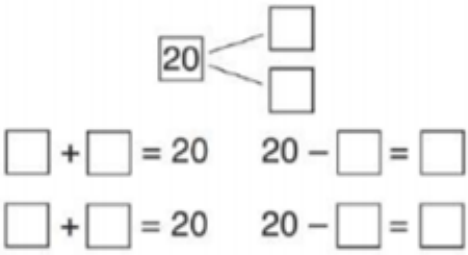

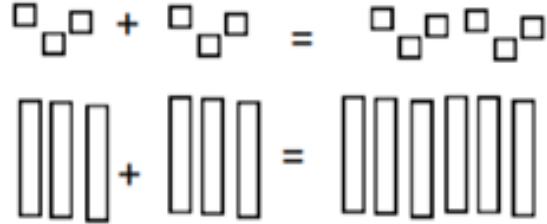

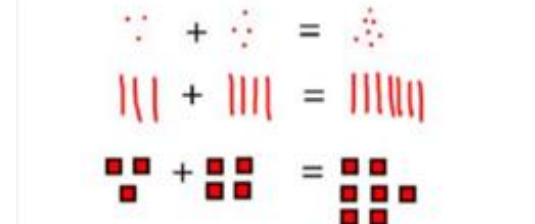

Pictorial representation – a pupil has sufficiently understood the 'hands on' experiences performed and can now relate them to representations, such as a diagram or picture of the problem.

Abstract representation—a pupil is now capable of representing problems by using mathematical notation, for example $12 \times 2 = 24$. It is important that conceptual understanding, supported by the use of representation, is secure for all procedures. Reinforcement is achieved by going back and forth between these representations.

Mental methods and strategies will work in partnership with these methods. A variety of mental calculation methods and the recall of key facts will be taught in school and tested regularly. The progression of mental methods and expectations will comply with the National Curriculum Statements from July 2014. The basis of our maths calculation policy is that written methods are complementary to mental methods and should not be seen as separate from them. Children should use mental methods when appropriate, but for calculations that they cannot do in their heads they use an efficient written method accurately and with confidence.

Add a 2 digit number and ones

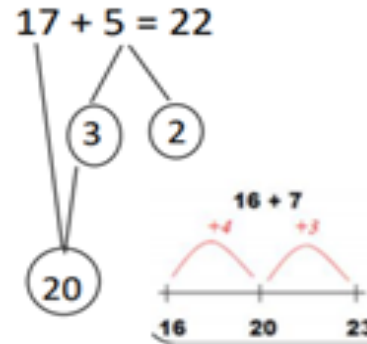

$17 + 5 = 22$
Use ten frame to make 'magic ten'

Children explore the pattern.

$17 + 5 = 22$

$27 + 5 = 32$

Use part part whole and number line to model.

$17 + 5 = 22$

Explore related facts

$17 + 5 = 22$

$5 + 17 = 22$

$22 - 17 = 5$

$22 - 5 = 17$

22	
17	5

Add a 2 digit number and tens

$25 + 10 = 35$

Explore that the ones digit does not change

$27 + 30$

$27 + 10 = 37$

$27 + 20 = 47$

$27 + \underline{\quad} = 57$

Add two 2 digit numbers

Model using dienes, place value counters and numicon

Use the number line and bridge 10 using the part whole model if necessary.

$25 + 47$
 $20 + 40 = 60$
 $5 + 7 = 12$
 $60 + 12 = 72$

Adding three single digits

$4 + 7 + 6 = 17$
Put 4 and 6 together to make 10 and add on 7.

Following on from making 10, make 10 with 2 of the digits (if possible) then add on the third digit.

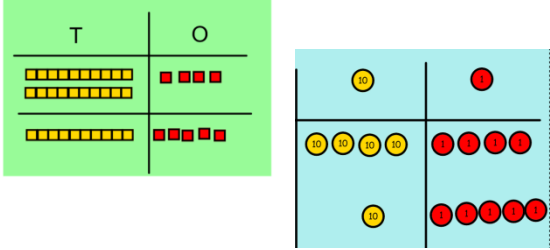

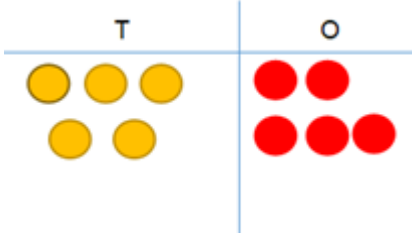

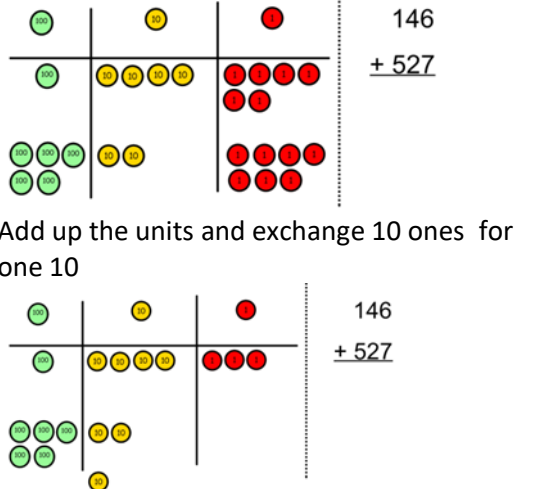

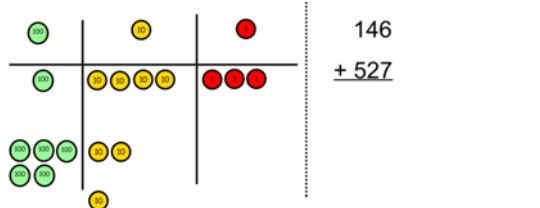

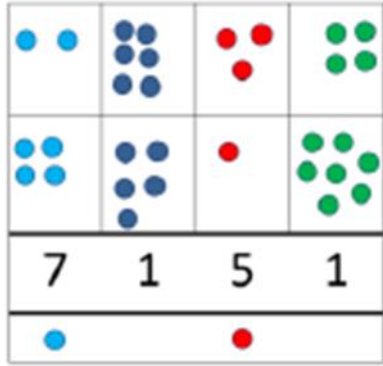

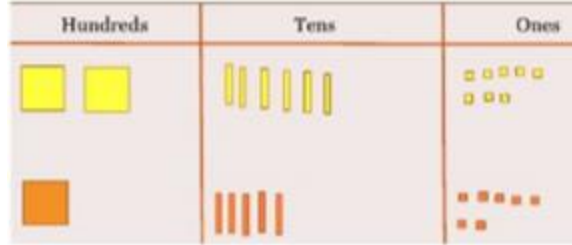

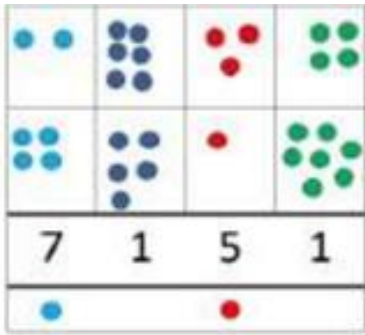

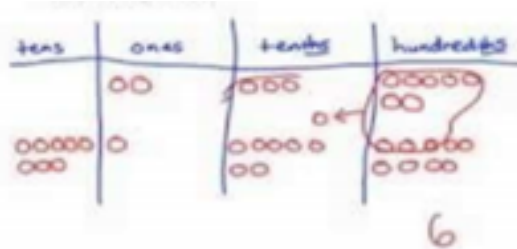

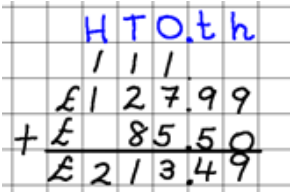

Add together three groups of objects. Draw a picture to recombine the groups to make 10.

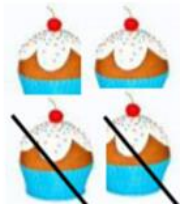

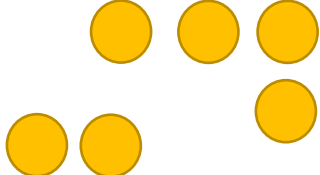

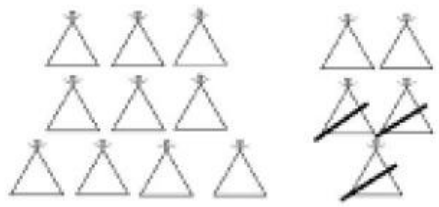

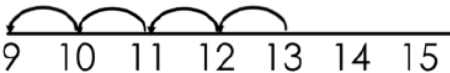

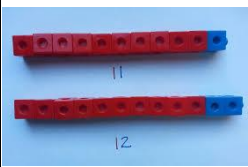

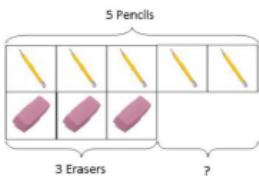

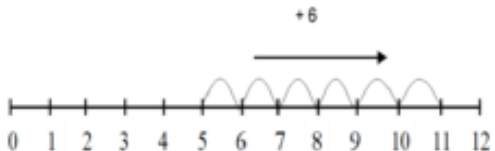

$(4) + 7 + (6) = (10) + (7)$
 $= (17)$

Combine the two numbers that make 10 and then add on the remainder.

Understanding arrays

Create arrays using counters/cubes to show multiplication sentences.

Draw arrays in different rotations to find commutative multiplication sentences.

Link arrays to area of rectangles.

Use an array to write multiplication sentences and reinforce repeated addition.

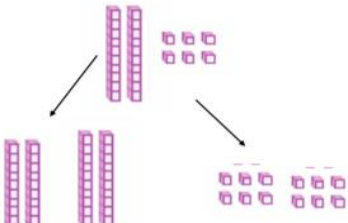

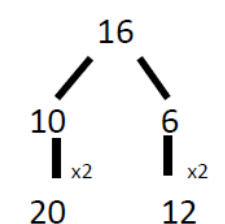

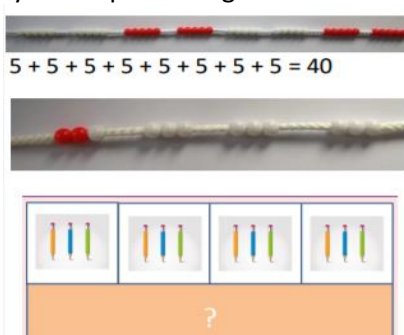

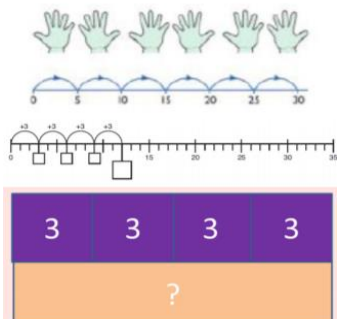

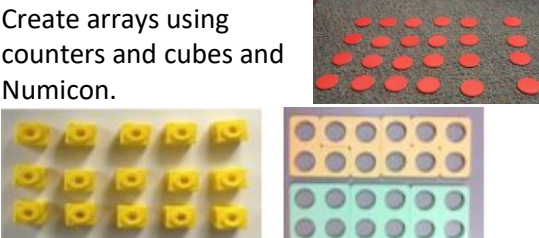

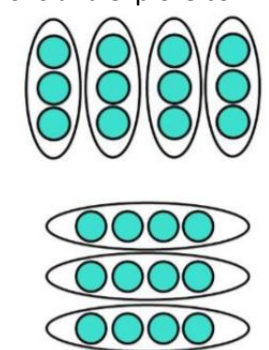

$$5 + 5 + 5 = 15$$

$$3 + 3 + 3 + 3 + 3 = 15$$

$$5 \times 3 = 15$$

$$3 \times 5 = 15$$

	Objective and Strategies	Concrete	Pictorial	Abstract
Y2 M U L T I P L I C A T I O N	Doubling	<p>Model doubling using dienes and PV counters.</p>  $40 + 12 = 52$	<p>Draw pictures and representations to show how to double numbers</p>	 <p>Partition a number and then double each part before recombining it back together.</p>
	Counting in multiples of 2, 3, 5 and 10 from 0 (repeated addition)	<p>Count the groups as children are skip counting, children may use their fingers as they are skip counting. Use bar models.</p>  $5 + 5 + 5 + 5 + 5 + 5 + 5 + 5 = 40$	<p>Number lines, counting sticks and bar models should be used to show representation of counting in multiples.</p> 	<p>Count in multiples of a number aloud.</p> <p>Write sequences with multiples of numbers.</p> <p>0, 2, 4, 6, 8, 10 0, 3, 6, 9, 12, 15 0, 5, 10, 15, 20, 25, 30</p> $4 \times 3 = \square$
	Multiplication is commutative	<p>Create arrays using counters and cubes and Numicon.</p>  <p>Pupils should understand that an array can represent different equations and that, as multiplication is commutative, the order of the multiplication does not affect the answer.</p>	<p>Use representations of arrays to show different calculations and explore commutativity.</p> 	<p>Use an array to write multiplication sentences and reinforce repeated addition.</p>  $12 = 3 \times 4$ $12 = 4 \times 3$ $5 + 5 + 5 = 15$ $3 + 3 + 3 + 3 + 3 = 15$ $5 \times 3 = 15$

Using the inverse

This should be taught alongside division, so pupils learn how they work alongside each other.

$$\square \times \square = \square$$

$$\square \times \square = \square$$

$$\square \div \square = \square$$

$$\square \div \square = \square$$

$$2 \times 4 = 8$$

$$4 \times 2 = 8$$

$$8 \div 2 = 4$$

$$8 \div 4 = 2$$

$$8 = 2 \times 4$$

$$8 = 4 \times 2$$

$$2 = 8 \div 4$$

$$4 = 8 \div 2$$

Show all 8 related fact family sentences.

Objective and Strategies

Multiplying two digit number by a one digit number

Grid method progressing to the formal method.

Solving problems including missing number problems, integer scaling problems.

Concrete

Show the link with arrays to first introduce the grid method.

4 rows of 10
4 rows of 3

Move on to using Base 10 to move towards a more compact method.

4 rows of 13

Move on to place value counters to show how we are finding groups of a number. We are multiplying by 4 so we need 4 rows.

Calculations
 4×126

Fill each row with 126

Calculations
 4×126

Add up each column, starting with the ones making any exchanges needed

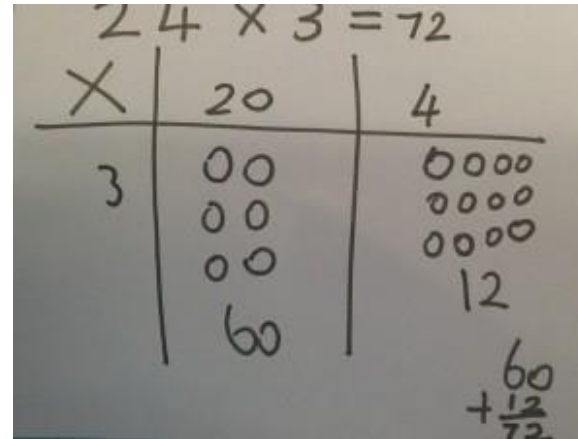

Then you have your answer.

Pictorial

Children can represent their work with place value counters in a way that they understand.

They can draw the counters using colours to show different amounts or just use the circles in the different columns to show their thinking as shown below.

Abstract

Start with multiplying by one digit numbers and showing the clear addition alongside the grid.

x	30	5
7	210	35

$$210 + 35 = 245$$

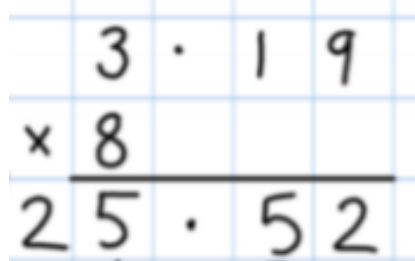

Moving forward, multiply by a 2 digit number showing the different rows within the grid method.

	10	8
10	100	80
3	30	24

x	1000	300	40	2
10	10000	3000	400	20
8	8000	2400	320	16

	Division as grouping	<p>Use cubes, counters, objects or place value counters to aid understanding.</p>  <p>24 divided into groups 6 = 4</p> $96 \div 3 = 32$ 	<p>Continue to use bar modelling to aid solving division problems.</p> 	<p>How many groups of 6 in 24?</p> $24 \div 6 = 4$
	Division with arrays	 <p>Link division to multiplication by creating an array and thinking about the number sentences that can be created.</p> <p>Eg $15 \div 3 = 5$ $15 \div 5 = 3$ $5 \times 3 = 15$ $3 \times 5 = 15$</p>	 <p>Draw an array and use lines to split the array into groups to make multiplication and division sentences.</p>	<p>Find the inverse of multiplication and division sentences by creating eight linking number sentences.</p> $7 \times 4 = 28$ $4 \times 7 = 28$ $28 \div 7 = 4$ $28 \div 4 = 7$ $28 = 7 \times 4$ $28 = 4 \times 7$ $4 = 28 \div 7$ $7 = 28 \div 4$
	Divide a two digit number by a one digit number by partitioning into tens and ones	<p>Eva uses a place value grid and the part whole model to solve $66 \div 3$</p> 	<p>See part whole number</p>	

	Objective and Strategies	Concrete	Pictorial	Abstract						
Y4 D I V I S I O N	Divide up to 3 digit number by a 1 digit number Short Division	$96 \div 3$ <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td></td> <td style="text-align: center;">Tens</td> <td style="text-align: center;">Units</td> </tr> <tr> <td></td> <td style="text-align: center;">3</td> <td style="text-align: center;">2</td> </tr> </table>  <p>Use place value counters to divide using the bus stop method alongside</p>  <p>$42 \div 3 =$</p> <p>Start with the biggest place value, we are sharing 40 into three groups. We can put 1 ten in each group and we have 1 ten left over.</p>  <p>We exchange this ten for ten ones and then share the ones equally among the groups.</p>  <p>We look how much in 1 group so the answer is 14.</p>		Tens	Units		3	2	<p>Student can continue to use drawn diagrams with dots or circles to help divide numbers into equal groups.</p>  <p>Encourage them to move towards counting in multiples to divide more efficiently.</p>	<p>Begin with a divisor that divides equally with no remainders</p>  <p>Children should be aware that the 0 is used to keep the place value, if the number is not divisible.</p>  <p>Move on to division with remainders</p>
